Subject: Pictures of yellow pollen - DTZ storm drains

Attachments: Gymnosperm Pollen.jpg [4447 KB]; Gymnosperm Pollen 2.jpg [131 KB]; Gymnosperm Pollen 3.jpg [3811 KB]

FYI, per our briefing last week, IDEM surface water quality scientists determined the yellow material that accumulated in DTZ storm drains, and that adhered to ER's sorbent booms, was pollen and likely from pine trees.

IDEM provided the attached microscope pictures of the pollen.

Thanks,
Jason

Subject: Pollen pictures

Jason, here are a few pictures of the sample you brought in last week from Fishers, IN. The substance in the sample was determined to be pollen from a gymnosperm. Let me know if you have any questions.

Kristen Arnold
